decrease your immune response, as use of these products may result in an increased risk of infection

- Tell your doctor if you are using medications that can prolong bleeding, such as aspirin, ibuprofen, or other blood thinners, as this may increase bruising or bleeding at the injection site
- The safety and effectiveness of RHA® fillers in areas other than those indicated have not been established in U.S. clinical studies
- Patients who experience skin injury near the site of injection with this product may be at a higher risk for side effects
- Minimize strenuous exercise, exposure to extensive sun or heat, and alcoholic beverages within the first 24 hours following treatment

What are possible side effects?
The most commonly reported side effects included injection-site redness, swelling, pain, tenderness, firmness, lumps/bumps, bruising, discoloration, and itching.

One of the risks with using these products is unintentional injection into a blood vessel, and while rare, the complications can be serious and may be permanent. These complications, which have been reported for facial injections, can include vision abnormalities, blindness, stroke, temporary scabs, or permanent scarring.

Delayed-onset inflammation near the site of dermal filler injections is one of the known side effects associated with dermal fillers. Cases of delayed-onset inflammation have been reported to occur at the treatment site following viral or bacterial illnesses or infections, vaccinations, or dental procedures.

Typically, the reported inflammation was responsive to being treated or resolved on its own.

As with all skin injection procedures, there is a risk of infection and recurrence of herpetic eruptions.

To report an adverse event with any RHA® product to Revance, please visit Safety.Revance.com or call at +1 (877) 373-8669.

Please visit RHACollection.com or talk to your doctor for more information.
